

Evosite programming front end test

Chop the supplied visual into working HTML and CSS. You can use JavaScript or JQuery (including plugins) to achieve the results expected.

Visual URL:

<https://drive.google.com/open?id=0Bz5OZEVx9fHLbVZzUVdRN0ljQig>

This contains link will give you access to a ZIP archive which contains both a PSD and a Fireworks PNG version of the same website visual. All of the required assets for you to chop the visual accurately are contained within the PSD, with the exception of the fonts. You can get a free 30 day trial version for either at:

<http://www.adobe.com/uk/creativecloud.html>.

If you don't have access to any of the specific fonts used in the visual, please use the closest font you have access to for the purpose of this demo.

A few pointers:

- We expect your submission to be valid HTML5 markup using the correct elements where applicable.
- We strongly recommend you build this on top of the Bootstrap framework.
- Plus points for using SCSS compiled with Grunt (please supply your Grunt.js if you choose to do this).
- Carousels should be working - e.g. the orange news panel should slide multiple news items when you click the arrows or circles. We use [Owl Carousel](#) for that usually.
- Responsive is not necessary but would be a bonus.
- Use as many CSS files as you like, separation of code is good.
- All links on the page can just like to #, you don't need to worry about any pages deeper than this visual shows.
- Hover/Active states are indicated with the mouse cursor on the visual.
- Please use web fonts for icons where applicable (e.g. Font awesome).
- Keep markup to the minimal amount.

We look forward to seeing what you can do.

Ideally present your work on Github or as a self contained ZIP file - you may need to zip a zip to get around email virus scanners, especially when you're supplying JS files.
